Not illustrated. 1907 Excerpt: .after inoculation, is rapidly solidified in ice water) a globular area of liquefaction occurred. If sugar is added, active fermentation takes place, with the production of large amounts of offensive gas. It grows well on agar, in bouillon, and in milk. Pathogenesis.--Is pathogenic for man, horses, sheep, dogs, rabbits, calves, pigs, goats, rats, mice, and guinea pigs. Cattle are said to be immune. When bacilli are applied to a scratched surface, infection is not likely to occur, as free oxygen seems to inhibit the growth; if, however, the wound is deep, rapid infection follows, young domestic, and laboratory animals dying within forty-eight hours. In man, the clinical manifestation of infection with this organism is known as malignant oedema. Infection has followed penetrating wounds of the body, by dirty tools, nails, splinters, bullets, etc. The disease is often quickly fatal. It produces, frequently, rapid moist gangrene. Bacilli...
